

Subject _____

Paper Source _____

Date: _____ Time: _____

Ans to the Ques:-

Given, $(0XFE825A80)_{16}$

[10:5] 7bit s ₁₂	s ₁₁	fun 3 5bit [4:1] opcode
1111111	01000	00100101

This is SB type,

Immediate = 11111111010

1's: 00000000101
+12's: 00000000110 $(00000000110)_2 = (6)_{10}$ Now, $(6 \times 2) = 12$

Target = PC-12

Each instruction is 4 byte.

 $(12 \div 4) = 3$. We have to go 3 instructions behind. $\therefore$ BEQ x₄, x₈, Label 3
